Ted Trikilis
Aran-Aqua Pollution Control Systems, Inc.
Chippewa Lake, OH 44215

Dear Ted,

I want to let you know what a great job your products are doing for our company. As you remember, we had 400,000 bushels of soy beans in a flat storage building that got wet from a leak in the roof. The beans clearly had a mold and odor problem. While waiting for your equipment to arrive we made the decision to sell 150,000 bushels of what was the best and cleanest of the beans to save them from further deterioration. On those beans we had to take a significant discount on the sale price because of their condition. When the equipment arrived we placed 150,000 bushels into a storage bin and treated it with your equipment placed before the air fan on the bin. Within a day or two the mold and odor problem was eliminated. To our surprise we were able to sell them without a discount. We then took the worst of the worst beans (wet, odor beyond sour, moldy, and discolored) and broke them down into three batches: two approximately 35,000 bushels, and one batch of 10,000 bushels and treated each for two days. The result was amazing! These beans came back to a highly marketable condition with no sour or rancid smell. We were then able to sell them with almost no discount.

In just a few days of utilizing your equipment we were able to recover many times over our initial investment on your equipment.

* I feel any grain operation should treat their corn, wheat, soybeans, etc. with this technology at least once for a couple of days to clean and disinfect it of mold, mildew, mytoxins, etc. and then on an occasional basis as conditions warrant.

* I found your company by doing my own independent research on the

internet,
which indicated that your technology was the best out there. I am very
happy to
tell you that my experience with your products confirms the research
that led me
to you in the first place.

* In the course of my research, I determined that your machines were
significantly less expensive than the Ozone Pumps currently being sold
to the
grain and other food industries. Now from my direct experience. it
would seem
that your equipment is also more effective.

I would highly recommend your products to any grain operation to
prevent mold,
mildew, odor, mytoxins, and other microbes from damaging their
inventory, as
well as to treat these diseases when they are present.

Sincerely,

Dean Schafer
